PREFACE

The present list, the seventh of this Library's bibliographical publications, is chiefly intended as a guide to the books exhibited during the meetings of the American Association for the Advancement of Science and the Bibliographical Society of America, December 30, 1907, to January 4, 1908. The second part of the list contains a small number of the Library's most valuable and interesting books in various subjects. The first part is composed exclusively of early printed books in the medical collection formed by Dr. Nicholas Senn of Chicago, donated by him to the Newberry Library and recently transferred, with his consent, to this Library; it contains all the incunabula, sixteen in number, including the *REGIMEN SANITATIS SALERNITANUM* of doubtful date, but believed to have been printed in the year 1500, and the major part of the books printed during the first half of the sixteenth century. Many of these books are of interest on account of their personal associations, as having formerly belonged to well known medical scholars, such as François Quinquæoeuf, J. S. Henninger, Johannes Boecler, Georg Walther, in addition to those whose ex-libris are mentioned in the text; nearly all of them belonged to the library of Professor Wilhelm Baum in Göttingen, and contain historical and bibliographical notes from his hand. Not a few of the volumes are notable for their bindings, though these in too many cases have not been well preserved. No description of the bindings, nor any investigation of the manuscript notes found in many of the books, has been attempted; nor has it been possible, in the time at command, to make more than summary notes of the illustrations, which are remarkable features, especially in many of the books dealing with surgery. To the short time in which the list has to be prepared should also be charged such inconsistencies and other inadvertencies as may remain in spite of all efforts to eradicate them. Needed alterations will be made in the complete list of the 15th and 16th century books in the Senn Collection, which is in course of preparation though it may not be issued for some time. Inconsistencies in the second part are due to the fact that changes in the cataloguing rules of the Library have been made from time to time, while it has not always seemed necessary to alter the electrotypes for the earlier material.
